Professional Experience

Global Web Corp – São Paulo - Brazil

2024 - present

Software Developer (Front End)

Responsible for developing and implementing scalable solutions using React, TypeScript, and Next.js for a people management system.

Core Application Development:

- Built 20 essential pages of the platform, ensuring usability and performance.
- Implemented reusable and accessible components, following UI/UX best practices.
- Integrated REST and GraphQL APIs for efficient data management.

Authentication and Security Integration:

- Developed a secure authentication system, using a server to manage HTTPS.
- Implemented a route verification middleware, ensuring only authenticated users could access specific areas of the system.

Optimization and Maintenance:

- Improved application performance, reducing load times and enhancing responsiveness.
- Fixed bugs and refined features, enhancing the overall user experience.
- Actively collaborated with the back-end team, ensuring seamless integration between front-end and back-end.

Methodologies and Best Practices:

- Structured the project following scalable patterns and maintained the initial boilerplate for testing.
- Applied design system principles to create a more consistent and intuitive interface.
- Worked under agile methodologies, participating in refinements and sprints for continuous value delivery.

These contributions made the people management system more efficient, secure, and scalable, providing an improved experience for both managers and employees.

Front End Developer

Responsible for maintenance and development using React, Typescript, NextJS, Contentful, Jest and Javascript in e-commerce platforms (Vtex).

- **Developed and implemented new features for Vtex's ecommerce platform, including:**
 - Application for geolocation, based on IP or Postcode.
 - Customization of a new safer and more efficient checkout
- **Developed landing pages and web sites using Headless CMS such as NextJS and Contentful**
- **Worked on maintaining and improving the platform's existing features, including:**
 - Performance optimization
 - Bug fixes
 - Addition of new features
- **Worked with product managers and designers to estimate and scope new functionalities**
- **Collaborated with back-end developers to determine best ways to have front-end applications interacting with the server side.**

With these contributions, the user experience was improved and helped to increase the company's sales.

Front End Developer

- Built front end applications with Javascript
- Gather requirements from clients and collaborated with other developers to build high fidelity layouts, regarding UI and UX segments

Front-End Developer

- Responsible for the development of desktop and mobile applications
- Co-responsible for testing the usability of applications and websites;
- Part of a team based on Kanban, responsible for developing the front end of the application and contributing to the development of other applications.

Front-End Developer

- Built front-end applications with HTML5, CSS and Javascript
- Mentorship of systems and web sites customization.
- Support the UI and UX team for sites and landing pages projects with Photoshop and Illustrator.
- Part of a SCRUM based team, working and contributing for all the application development lifecycle.

Education

2012 - 2015 - **Analysis and Systems Development** - FATEC College (São Paulo - Brazil)
